

Sprint 1 Report

PayPerRead 1-25-21

Actions to stop doing

We haven't developed any bad habits thus far. We are still very early on in the development process, however, it's been going well. We use trello to track tasks and everyone is contributing.

Actions to start doing

Last sprint, our work was very decentralized and people were doing well, but the intersection was low. Part of that is inherent in the research and design phase, but we could have been more collaborative in the figma and iframe api design. Lots of the work in the next sprint will require more collaboration, and I think with it we can create a very good product. Additionally, the various tools we have been using(e.g. Trello, Figma, etc.) have been very helpful, and so it might be a good idea to find additional tools we can use, such as ones for deciding a meeting time.

Actions to keep doing

Team meetings were extremely helpful in clearing up doubts and making progress on planning, so we should definitely keep doing these meetings. Assigning tasks at the start of the sprint was also very helpful because it allows me to plan what to study/research early on to get the work done.

Work completed/not completed:

We completed all of our user stories for sprint1. Including the following tasks.

- Design on figma
- Design user signup flow
- Investigate Iframe
- Build basic backend, connect mongo.

Work Completion Rate

We really only worked on sprint1 for one week. Our team averaged roughly 5 hours this week, which is 1 hour per work day. Lots of the time was spent working on configuring mongodb, setting up/learning rust and experimenting with iframes. So we expect to be able to get a lot more work done in the following sprints.
