Sprint 2 Report

PayPerRead 2-8-22

Actions to stop doing

For this second interval, we haven't developed any bad habits yet. Overall, we are able to accomplish task on time despite being occupied with other classes. We'd like to not procrastinate writing our reports til end of sprint.

Actions to start doing

This sprint, our work was balanced pretty evenly throughout. Now that the basic framework has been fleshed out, we intend to have more standups to talk about our developments for the actual site. By having more standups, we're able to be more specific on the requirements of task goals. In terms of code standards, we'd like to use some kind of formatter to keep our code check. Some ideas include:

- Cargo fmt and cargo clippy
- Js-beautify, eslint

Additionally, we would want to start considering front end testing for important functions and testing frameworks such as Jest or Selenium. Aside from all code implementation, we want to start updating Trello boards and Figma designs as soon as possible.

Actions to keep doing

- We should maintain the work ethic we had in the first week of the sprint throughout the entire sprint, as we managed to get most of the work done within that single week.
- Have more extended meetup/work sessions to concentrate and develop full stack features, along with receiving feedback in real time.
- Updating each other via sprint standups so that we all get a better understanding of how much progress we are making.
- Keep up with the solid attitudes and good vibes.

Work completed/not completed:

We completed all of our user stories for sprint2. Including the following tasks.

- Indexes to mongodb
- Signup reader front/back
- JWT credentials
- Session cookie credentials

- Create publisher backend
- Basic implementation of homepage.
- Add subtract balance

Work Completion Rate

    We finished 100% of the tasks for sprint2. We averaged 10 hours between the group. Some learning, design, and coding involved.
